

Quiz 10

1) A pole vaulter at the Relativistic Olympics sprints past you with a speed of $0.65c$. When he is at rest, his pole is 7.0 m long.

$$\gamma = \frac{1}{\sqrt{1 - \frac{v^2}{c^2}}}, \Delta t = \gamma \Delta t_0, L = \frac{L_0}{\gamma}$$

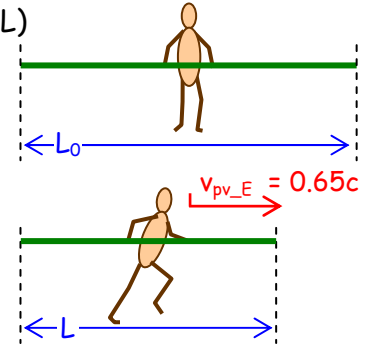

a)² What is gamma?

b)² What length do you perceive the pole to be as he passes you, assuming his pole is parallel to his motion? (Draw the poles for him at rest and running & label L_0 & L)

$$\gamma = \frac{1}{\sqrt{1 - \frac{v^2}{c^2}}} = \frac{1}{\sqrt{1 - \frac{0.65^2 c^2}{c^2}}} = \frac{1}{\sqrt{1 - 0.4225}} = 1.32$$

$$L = \frac{L_0}{\gamma} = \frac{7\text{m}}{1.32} = 5.32\text{ m}$$

The proper length occurs in the reference frame where the object (or distance) is at rest. The pole is at rest in the runner's reference frame.

2) A spacecraft moves past a student with a relative velocity of $0.90c$. The pilot of the spacecraft works out for 30 minutes on her watch.

a)² What is gamma?

b)² How long does the pilot exercise according to the student? (Draw hands on Earth's clock and label Δt_0 & Δt)

$$\gamma = \frac{1}{\sqrt{1 - \frac{v^2}{c^2}}} = \frac{1}{\sqrt{1 - \frac{0.90^2 c^2}{c^2}}} = \frac{1}{\sqrt{0.19}} = 2.29$$

$$\Delta t = \gamma \Delta t_0 = 2.29(30\text{ min}) = 68.8\text{ min} = 1\text{ hr } 8.8\text{ min}$$

The proper time is in the reference frame where the clock stays in the same place — the pilot's clock is in the same place for her at the beginning and end of her exercises.

3)² Solve the Lorentz factor for v: $\gamma = \frac{1}{\sqrt{1 - \frac{v^2}{c^2}}}$

Square both sides:

$$\gamma^2 = \frac{1}{1 - \frac{v^2}{c^2}}$$

Move the 1:

$$\frac{v^2}{c^2} = 1 - \frac{1}{\gamma^2}$$

Multiply both sides by the denominator:

$$\gamma^2 \left(1 - \frac{v^2}{c^2}\right) = 1$$

Multiply by c^2 :

$$v^2 = \left(1 - \frac{1}{\gamma^2}\right) c^2$$

Divide by γ^2 :

$$1 - \frac{v^2}{c^2} = \frac{1}{\gamma^2}$$

Take the square root of both sides:

$$v = \sqrt{1 - \frac{1}{\gamma^2}} c$$
